

PROFESSIONAL SUMMARY

MCA graduate and B.Sc. Computer Science graduate with hands-on experience building full-stack, AI-powered, and blockchain applications using Java, Python, React, Node.js, Flask, and LLM APIs (Groq). Independently designed and deployed 8+ end-to-end projects, backed by certifications in SQL, Data Analysis, Prompt Engineering, and Anthropic's Claude/MCP tools. Seeking Software Developer / Full-Stack Developer / AI Engineer roles, available immediately with flexibility to relocate anywhere in India.

EDUCATION

MCA | Avanthi Institute of Engineering & Technology
2024 – 2026 | Status: Completed
Hyderabad

B.Sc. Computer Science | Kakatiya University
Completed 2024 | Warangal | CGPA: 6.51/10

Intermediate & 10th | Sri Nalanda Jr. College & Singareni Collieries High School
CGPA: 6.32/10 & 6.7/10 | Kothagudem

EXPERIENCE

Academic & Freelance Project Experience

Independent Software & AI Developer 2024 – Present

- Architected and deployed 8+ full-stack, AI, and blockchain applications from scratch, managing end-to-end database design, REST APIs, and system security
- Utilized AI-assisted development workflows (Claude, Groq) to accelerate prototyping, debugging, and production deployments

TECHNICAL SKILLS

Languages: Java (OOP, Java 11+), Python, JavaScript, SQL, PL/SQL, C++

AI & LLM: Groq API, LLM Integration (LLaMA), Prompt Engineering, Cloud API Integration

Web Development: React.js (Vite), Node.js, Express.js, Flask, REST API Design, Tailwind CSS

Database: MySQL, PostgreSQL, CRUD Operations, Database Design

Architecture & Tools: Software Architecture, Fault-Tolerant System Design, Git, GitHub, Docker, Postman

CERTIFICATIONS

- SQL and Relational Databases 101
- Data Analysis Using Python
- Prompt Engineering for Everyone
- Deloitte:** Cyber Security Simulation, Data Analytics Simulation
- Anthropic:** Claude 101, Claude Code 101, Claude Code in Action, Claude with the Anthropic API, Introduction to MCP, MCP Advanced Topics
- Udemy:** Complete Prompt Engineering for AI Bootcamp (2026), Complete Full-Stack Web Development Bootcamp

KEY STRENGTHS

- AI-Assisted Efficiency** — leverages modern AI tools (Claude, Groq, Prompt Engineering) to accelerate rapid prototyping and software development workflows
- Independently conceived, built, and deployed 8+ end-to-end projects while completing MCA coursework
- Strong problem-solving skills demonstrated through debugging deployment and API integration issues
- Quick learner — self-taught new technologies (Groq API, Motoko/ICP, RAG) through independent research
- Strong focus on writing clean, scalable, and maintainable code

PROJECTS

AI Projects

Panda AI - Multi-User AI Assistant Platform

Flask, Python, Groq API, REST APIs

Built this to have a personal AI assistant with real web search and file understanding, not just a text chatbot — wanted full control over the stack instead of depending on a single paid API.

- Engineered a multi-user AI assistant with real-time search grounding and multimodal file processing (PDF, image, audio, video)
- Designed multi-provider fallback architecture (3 Groq API keys + OpenRouter) achieving zero-cost, high-availability deployment
- Architected stateless REST API design to support concurrent multi-user sessions without performance degradation

Universal AI-Powered Resource & Budget ERP System

Java, Groq LLM, REST API

Wanted to explore how AI could go beyond chatbots and actually help with real business decisions — like knowing when to reorder stock or flagging a suspicious transaction.

- Delivered a multi-domain ERP system with AI engine for business insights, auto-reordering, and fraud detection
- Developed REST API and browser dashboard supporting concurrent multi-user sessions across 4+ business modules

AI Blog Platform

React, Express, Groq LLaMA API

Built to test how much of a content pipeline — writing, SEO, and reader interaction — could be handled end-to-end by AI.

- Created an AI blog platform with content generation, SEO automation, and context-aware RAG chatbot
- Established a security-first architecture keeping API keys server-side only, following production-grade practices

Java Projects

Inventory Management System

Java, Java Swing, ArrayList, OOP

Built to understand how businesses actually track profit and stock in real time, and to get hands-on with Java Swing for the first time.

- Created a GUI-based system using Java Swing with real-time data visualization through JTables
- Automated profit/stock calculations and implemented a Low Stock Alert with transaction logging
- Designed to handle 100+ inventory records with efficient ArrayList-based data operations

E-Commerce Shopping Console Application

Java, MySQL, Collections Framework

Built to simulate a real shopping workflow end-to-end, from browsing to secure checkout, focusing on transaction-safe logic.

- Constructed a shopping simulation with dynamic cart, product catalog, and secure wallet payment system
- Applied OOP principles to automate stock updates across 5+ product categories

Web Development Projects

WaveCoin - Decentralized Token Application

Motoko, Internet Computer (ICP), DFX

Built to understand how blockchain transactions actually work under the hood, beyond just reading about crypto.

- Engineered custom cryptocurrency logic for minting and transferring tokens on the blockchain
- Deployed canisters and integrated a frontend for real-time balance tracking

PeakNFT - NFT Minting Platform

React.js, Solidity/Motoko, IPFS

Created to explore how NFTs are actually minted and stored, and to work with decentralized storage for the first time.

- Created a platform to mint and manage unique digital assets (NFTs) with decentralized storage for metadata
- Integrated wallet connectivity for secure user transactions with on-chain verification

Advanced React Blog Platform

React.js, Node.js, Express, PostgreSQL/MongoDB

Built as a deeper dive into real authentication and session handling in a full-stack app, beyond basic CRUD.

- Developed a complete CRUD application with secure user authentication and session management
